EDUCATION

The Hong Kong Polytechnic University 25–26 Semester 2 · GPA 3.9 / 4.3
B.Sc. (Hons) in Computing

AI / ML BACKGROUND

Machine Learning Completed the **Machine Learning Specialization** (Andrew Ng) on [deeplearning.ai](#) — supervised learning, regression and classification, trees and ensembles, neural networks.

Currently studying Dive into Deep Learning (D2L) — [zh.d2l.ai](#); Computer Vision this semester (COMP4423).

EXPERIENCE

Forward Deployed Engineer / AI Intern Jun 3 – Aug 31, 2026
Magic Compass · Hong Kong

- Architected and shipped an AI-native risk-control panel for a financial platform, replacing manual triage of platform events with policy-driven AI agents.
- Built agents that turn real-time events (withdrawals, trading halts, mispricing) into compliance-aware action recommendations, and engineered the pipeline from event ingestion to operator-facing decisions.

PROJECTS

OpenWisdom — Social-Science Agent Skills Jul 2026 · 1 day
Founder & Sole Developer · open source · published to npm

- Built and open-sourced a library of Agent Skills packaging methods from psychology, sociology and economics for any modern coding agent to consume.
- Shipped a dual install surface — a CLI plus an MCP stdio server for in-session agent use; works with Claude Code, Cursor, Codex and Copilot.

Copier — Windows Clipboard Island Jul 2026 · 2 days
Founder & Sole Developer · nidecopier.com · v0.1.0 released

- Took a clipboard manager from concept to released Windows product (C# / .NET WPF, local-first SQLite) in two days, then shipped it as a free tier plus one-time licence.

AI COLLABORATION

Agent protocols Hands-on with MCP (Model Context Protocol) — stdio servers, tool and resource contracts, and dual CLI / server install surfaces.

Working with AI Task decomposition, context and memory management, and verification loops that keep AI-produced output traceable to committed artefacts. A genuine interest in how agent harnesses are put together, not just in what they ship.

CORE STRENGTHS

Learning velocity Self-directed and fast in unfamiliar territory — deep learning, agent protocols and systems work picked up without formal training, sustained by a GPA of 3.9 / 4.3.

Delivers from zero Three production deliverables; two started from an empty directory and released within days.
